## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 112***

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1-2 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The terms "much smaller" and "substantially" in claim 1 are relative terms which render the claim indefinite. These terms are not defined by the claim, the specification does not provide a standard for ascertaining the requisite degree, and one of ordinary skill in the art would not be reasonably apprised of the scope of the invention.

### ***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Binder Magnete(DE3928066), cited on applicant's IDS, in view of Kubach or Boyd, both references previously cited. Binder Magnete discloses an electromagnetic valve actuator comprising an actuator member 12 movable under the effect of a resilient member 24 and of at least one coil 13, and at least one permanent magnet 10 arranged to hold the actuator member in at least one of its extreme positions against the resilient

Art Unit: 2832

member when the coil is not powered, the coil being associated with a core comprising two portions (15,15A) having respective first facets in contact with the permanent magnet over substantially an entire surface of said facets and respective second facets that present between them an airgap 9 of size that is smaller than a thickness of the permanent magnet, wherein the airgap forms a right angle with the direction of magnetization of the permanent magnet.

Binder Magnete did not disclose an airgap of a size that is much smaller than a thickness of the permanent magnet. Kuback and Boyd each shows an airgap of a size that is much smaller than a thickness of the permanent magnet, an equivalent structure known in the art. Therefore, because these actuators were art-recognized equivalents at the time the invention was made, one of ordinary skill in the art would have found it obvious to substitute an airgap of a size that is much smaller than a thickness of the permanent magnet.

4. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
